WEC — WORLD ENERGY CRISIS

PROJECT WHITE PAPER

Draft for review | 4 November 2026

Building a community-led Solana project through transparency and responsible development.

1. Executive Summary

WEC (World Energy Crisis) is a community-driven digital asset on the Solana blockchain. The project's current focus is building an informed, engaged community and developing the project transparently over time.

WEC is at an early stage. Its current purpose is community participation and ecosystem development. Additional token utility is a future goal, not a feature that should be represented as already available.

2. Vision and Mission

WEC aims to build a lasting community-led project through consistent communication, responsible development and shared participation. The project intends to grow steadily rather than rely on short-term hype.

Future work may include community initiatives, partnerships and additional ecosystem features. Specific features and launch dates will be announced only when sufficiently defined.

3. Token Information

Network: Solana

Token name: WEC — World Energy Crisis

Mint address: H9x6twcxMz2niP3jhgRbSDZtg4KVx136kw6FLXczunhP

The project has previously stated a total supply of 1,000,000,000 WEC and 6 decimal places. These details must be verified against the on-chain mint before publication.

WEC is not represented in this document as equity, company ownership, a claim on profits or a promise of financial return.

4. Trading and Liquidity

The project has supplied this Meteora DAMM V2 pool address:
9ttuP8GKTWnBr7c5ENkGEnXdgWXYFtLrj6curkEc5QfN

Pool reserves, liquidity, trading routes and prices can change. Market capitalisation and fully diluted valuation are not cash held by the project and do not indicate how much holders can sell. Trades may be affected by low liquidity, price impact, slippage and network conditions.

5. Supply and Distribution

Previous project information described a 90% launch allocation and 10% reserve allocation. These figures and wallet balances have not been independently verified for this draft.

Before publication, provide an on-chain allocation table showing each allocation, wallet address, amount, purpose and any actual vesting or lock-up terms. Do not describe tokens as locked, burned or inaccessible unless independently verifiable on-chain.

6. Roadmap and Future Utility

The project intends to publish a roadmap with practical milestones and clear distinctions between completed work, work in progress and ideas under consideration.

Potential future areas include community programmes, partnerships and additional token utility. These are plans, not promises. No feature, benefit, launch date or partnership is guaranteed by this document.

7. Community and Official Channels

Website: https://stellular-sawine-b03f44.netlify.app

X: https://x.com/wec2026

Telegram: https://t.me/+sFlividCj4BjY2Jk

WEC aims to communicate material project developments clearly, including changes to supply, treasury or team wallets, liquidity arrangements, security incidents and roadmap milestones.

8. Security and Administration

This draft does not claim that mint authority, freeze authority or other administrative permissions have been revoked. Those settings should be checked on-chain and accurately disclosed.

Any future governance process, voting rights, treasury controls or administrative structure should be documented before being described as an existing feature. Never share wallet seed phrases or private keys.

9. Risks

Digital assets are volatile and may lose some or all of their value. Liquidity may be limited, and holders may be unable to sell at an expected price or at all. Other risks include smart-contract and protocol vulnerabilities, wallet compromise, regulatory changes and the possibility that planned development does not occur.

No market capitalisation, price, trading volume, listing, community size or project statement guarantees future performance. The project does not encourage wash trading, artificial volume or misleading promotion.

10. Disclaimer and Draft Status

This document is for general project information only. It is not financial, investment, legal or tax advice, nor an offer or solicitation to buy or sell a digital asset.

Nothing in this document guarantees profits, appreciation, liquidity, exchange listings, token utility or future milestones. Readers should conduct their own research and seek independent professional advice where appropriate.

STATUS: Working draft based on information supplied by the project; not independently audited. Before public release, verify supply and decimals on-chain, confirm pool and wallet details, publish accurate allocations, distinguish current from planned utility, and obtain appropriate legal and compliance review.

Document date: 4 November 2026.
